[Notice] End of week 1 updates - please read!

Posted 2026-02-21T10:10:35.325Z

Hi everyone!

It was lovely to meet you all this week! 🙂 The first week should have been pretty light. By the end of this weekend all you should *definitely* make sure you've done is watch all of the first week of lectures.

Here are some updates for the end of this week.

📢 Week 2 Lecture will be in-person on MONDAY!

Our week 2 lecture will be **in-person** in the same location. This is the day our one lecture a week will be all term. It will also be streamed online just like last time. This information is on the timetable page.

🐸 Assignment 1 - get started!

Assignment 1 was released nearly a week ago. Congrats to everyone who has gotten started with it. A quick summary of the questions are:

- **Question 1:** Can be done completely with week 1 knowledge
- **Question 2:** 75% can be done with week 1 knowledge, the rest relies on mostly the CSS Mobile lecture in week 2
- **Question 3:** 75% can be done with week 1 knowledge, the rest relies on mostly the CSS Mobile lecture in week 2

👷 FREE Computer Science Pitch Competition Info Night

*The **CompSci Pitch Comp (T1 2026)** is now open for UNSW students (undergraduate and postgraduate) who are already designing and building real products.*

*There is a **$10,000 prize pool**, and the top 10 teams receive a **golden ticket to pitch for up to $100,000** to the UNSW Investment Committee.*

*Applications close **15 March 2026**.*

***Bonus:** Come join our workshops for software builders → You don't need to be applying to the Competition to join the workshops!*

Find out more here → https://unswfounders.com/cse-pitch-comp

👬 Weekly Monday Social Hang!

Every Monday from 4pm-6pm we have the Quadrangle room 1001 booked (that is the on the 1st level of the Quadrangle near the steps that take you up campus). If you're keen to just meet other COMP6080 students feel free to drop in there 🙂

🐶 Preparing for next couple of weeks

This is a helpful guide for how to balance work over the next week or two, just so things seem a bit more manageable:

- **This weekend**:
  - Watch all week 1 lectures you haven't watched
  - Attempt question 1 & 2 in assignment 1 (pictocode)
- **Week 2:**
  - COME TO THE LIVE LECTURE NEXT WEEK 🙂 We will demo some HTML/CSS page building.

- Watch week 2 pre-recorded lectures.
- Try to finish assignment 1 (pictocode) by completing question 3

- **Week 3:**
  - Let's discuss later 😎

I believe in you, don't procrastinate like I did as a student, slow and steady wins the race 🐢

Enjoy your way too hot weekend 🔆

Hayden

[Notice] Important - Week 1 mid-week update

Posted 2026-02-17T05:17:39.829Z

Hi everyone!

Thanks for the lecture last night 🙂 If you missed it you can access it in the sidebar of the course website (direct link here). The code is also uploaded.

I just wanted to highlight a few important points or followups from the lecture last night:

- **Assignment 1 due**: Assignment 1 is due 8pm on the Monday of week 3. There is a 4 day late penalty so the latest submission we will accept (with a 20% penalty) is 8pm on the Friday of week 3.
- **One lecture per week**: We only have ONE live lecture per week - we do this because there are already another 2 hours of pre-recorded per week, such that the overall total is 4 hours. We think it's a good balance - pre recorded lectures are great because you can spend time getting them right (and therefore optimise how much information you convey to students), and live lectures are great to keep things fresh and adaptive and do a lot of demoing. Most of the "core" content in the course is covered in pre-recorded, and the live lectures are essentially doing demos with the things that we've learned. But importantly with this topic - always check the lecture timetable.
- **Git requirements**: We touched briefly on assignment 1 last night, and we'll continue to unpack it in the coming week. However, one thing that is worth noting is the GIT REQUIREMENTS (section 6 of the spec). To ensure that tutors can follow how your thinking and work unfolds throughout the assignment, we require that you regularly commit your work in small chunks. If you're worried about this - don't stress! Thousands of students have done this before you without much hastle, so just post on the forum or join a help session if you're nervous about it 🙂

I'll update you all on Friday (with our weekly notice) and catch everyone on Monday!

Hayden

[Notice] Welcome to COMP6080 26T1

Posted 2026-02-15T01:17:26.611Z

TL;DR!! *No pre-work for the term. Just turn up to the first lecture on MONDAY night (in-person in* Sir John Clancy Auditorium)*. It doesn't matter whether you're enrolled in the online lecture or in-person,* ***please come in person if you are free! We have more than enough space for everyone even if you enrolled online****. During that first lecture we will cover* ***everything*** *about the course. Nothing to do before that. It will be a light intro lecture.*

Hi everyone!

My name is Hayden, and welcome to COMP6080 this term. This is one of the biggest electives in CSE, with some of the most awesome students (you).

I'm going to be using our forum software (Discourse) to send you notices throughout the term. I will send one at the end of every week. So please make sure you keep an eye on your inbox.

0. Course website

Go and bookmark the course website. Then log in! It's our home for the term. I made this website myself, it's designed specifically to optimise YOUR experience and it's built using tools and technologies YOU will learn before the endo f the course. You can actually see the source code here. You're welcome to put in a pull request if you want to contribute!

Don't forget to read the course outline.

1. First lecture in person - everyone can come

For at least the first few weeks of term we will do lectures in-person (that is also streamed online via the link on the course website).

It does not matter whether you enrolled in an online or in-person lecture stream, you are more than welcome to come! It's a huge theatre.

The week 1 lecture will be delivered **in person in Sir John Clancy Auditorium.**

2. Forum

You can access the forum in the sidebar of the course website. The forum is used for all questions in the course, as well as weekly notices. For weekly notices I will send them out at the end of every week (like this one), and will pin them. They will also be visible on the course website.

3. Go and introduce yourself

Please introduce yourself! There are 800~ of you and it would be great for you all to get a chance to meet each other a little bit.

4. Gitlab

Check out gitlab. You should be able to see a few new repos for 6080. Content will appear here throughout the term and we will be using gitlab for your work this term. I will cover this more on Monday too. Expect to see some invites / emails rolling out to you in the next few days.

If you are a postgrad student who hasn't used gitlab before, I would recommend checking out this git intro activity.

5. Go read the course outline

If you haven't yet already, I would recommend you read the course outline on the course site. It outlines a lot of things about how the course works, including:

- **Lectures**: Each week we do a 2 hour lecture on one night (Monday for weeks 1-8 and Thursday for weeks 9-10), and then the remaining 2 hours of lectures are pre-recorded for you to watch in your own time. The pre-recorded lectures are watched after the live lecture each week. It's all on YouTube for simplicity. Every week your strategy should be to watch the live lecture on Monday, then watch all the pre-recorded lectures for the week after that.
- **Tutorials**: Tutorial timetabling can be found here. Most tutorials are in person and some are online. However, you can attend whichever tutorial you want to attend - or multiple. We will be recorded tutorials and breaking them up per-question so that you

can go back and watch specific questions at-ease later. All of the exercises for you to learn from in the course can be found here. Some tutorials streams will be combined in week 3 - but we will talk about that more in the lecture.

- **Help Sessions**: We run help sessions too, there is a timetable for it.
- **Assessment**: There are 4 assignments, and one exam. No other assessments.
- **Content**: All of the lectures can be found here, and all of the tutorials found here.

tl;dr Watch 4 hours of lectures a week, attend as many or as little tutorial time as you like, do an assignment every few weeks on average, and finish the course with an exam.

6. First Assignment

Your first assignment will be released by 6pm on Monday of week 1 just before our first lecture. Check out your gitlab homepage to find it!

7. What do I need to do before the start of term?

Nothing! We will cover *everything* in the first lecture (in-person but also streamed) in week 1. No need to do any pre-work before that. So just enjoy the rest of your last week + weekend and I'll see you soon 🙂

Thanks everyone! CAN'T WAIT TO SEE YOU! 🥨🥨🥨🥨🥨

Hayden

Introduce Yourselves (Please)!

Posted 2026-02-15T00:39:09.882Z

Hi everyone!

I'd love to get to know you - please just make a post here 🙂

My name is Hayden - I work full time as a CTO & Co-founder of a Sydney based fintech startup whilst also teaching casually at UNSW (which is so fun because you're all fun).

I spent my time at uni building solar cars, programming robots to play soccer, and working as a part-time web developer. My primary day job at Pearler now consists of running a team of engineers building web technologies as well as leading the product team on creating new products that we deliver to tens of thousands of Australians.

Outside of work stuff (🤭) I love learning about food, planes, photography, videography, and much more. Here is a photo of fried chicken burgers I made!

2022-09-05 19-35-57 - Fried

Chicken2268×4032 1.2 MB

Say hi and try and share one random fact about you! I love to learn about the people I'm working together with in a course like this. Learning a tiny bit is always helpful. Even just random photos of something cool you did or saw recently is awesome.
