Assignment 1

1. Before you start

1.1. Background & Motivation

This assessment focuses on you implementing a series of basic web pages that look and behave like imag

A basic capability required of someone working with user-facing interfaces is to be able to produce a web been clearly specified (e.g. an image). A common workflow within a product team may consist of a design will then take and use HTML/CSS to build the webpage for usage. In reality this process tends to be a bit m provided are usually quite detailed and visually consist of many interact layers. However, for the sake of si flattened images with written requirements.

This assessment aims to allow students to demonstrate knowledge they've developed during week 1-3 of t and CSS.

This assessment focuses on demonstrating skills with HTML ("Hyper Text Markup Language") and CSS ("(course. Most of the tasks centre around this.

1.2. Lectures to watch

You will *need* to watch at least the following lectures before starting (it will help you get started):

- HTML Fundamentals
- CSS Rules
- CSS Formatting
- Flexbox
- Mobile CSS
- Fonts

You will *need* to watch at least the following lectures to finish the assessment completely:

- Dev Tools

2. The Task 🔥 🔥

Please see details about the task here.

The reluctant use of a generally-advised-against <marquee> HTML t

3. Analysing the pages

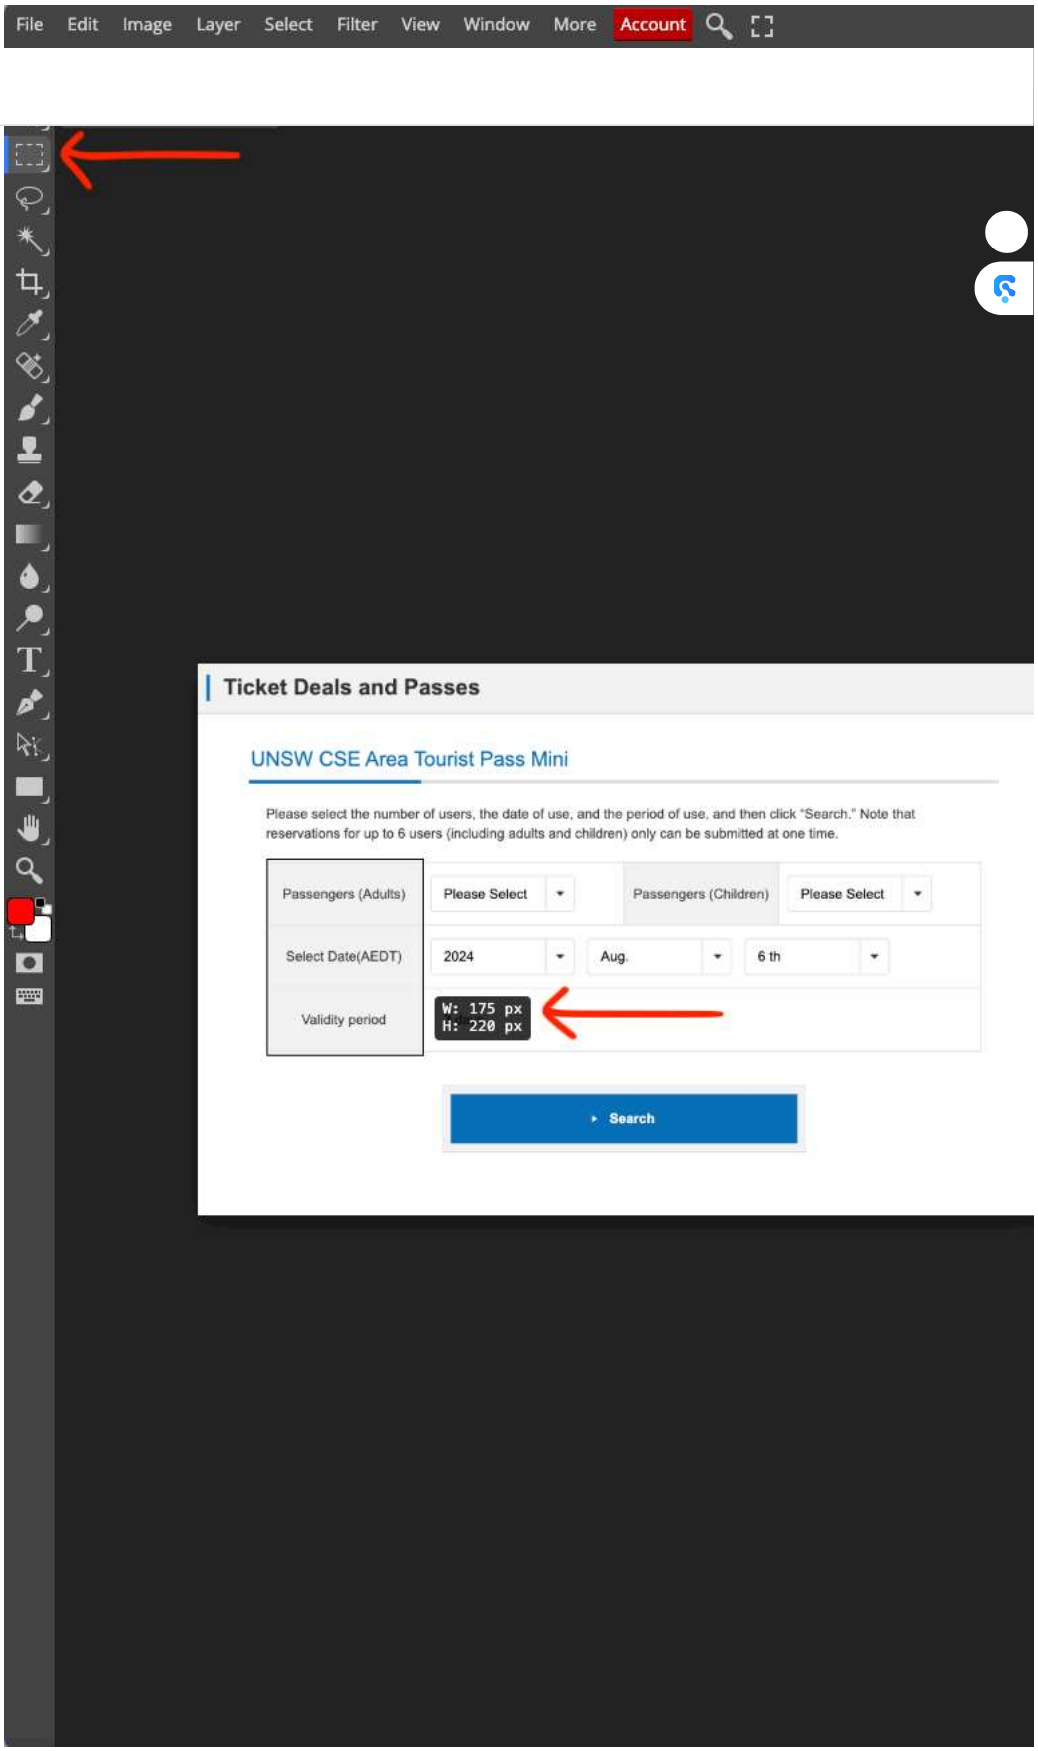
3.1. Analysing the Pages

Two things will want to seek external help for are:

1. Determining the particular colour (RGB or HEX) of various pixels (we recommend the use of a chrome for you)

Assignments

2. Determining the size of particular elements (we recommend the use of photopea). An screenshot exar



3.2. Font Sizes

You will also be curious to know what the correct font-size and other font properties are for this assignmer relationship between how a font looks and the properties that are set for the element.

Generally the best approach is to set a basic font size (e.g. `font-size: 1.1em`), see how it looks, and if it the `em` or `rem` value appropriately until you're comfortable with it. You will not be penalised for having foı practices when it comes to font sizing later in the course.

Assignments

4. Constraints & Assumptions

Don't forget to put this code in the head of each webpage you make:

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```

. It will help you on mobile responsive view get the right zoom.

4.2. Fair use of methods

You are prohibited from unreasonable use of images and svg to solve your problem - more specifically, yo
single SVG image or single JPG.

4.3. Browser Compatibility

You should ensure that your programs have been tested on Google Chrome, ensuring that you are running

4.4. External libraries

You are restricted from using any third party CSS libraries when completing this assessment. Basically, thi
and `<link />` tags if it's from a file you did not write yourself, and you shouldn't be copying any larger ch

5. Marking Criteria

Your assignment will be hand-marked by tutor(s) in the course according to the criteria below.

5.1. Visual Compliance (50%)

- Rendered static HTML page accurately matches the reference image provided for each task. *Please n position on every line. Different screens, browsers, operating systems may display text slightly differe positions.*
- For specified tasks, if applicable, pseudo-class behaviour satisfies the task requirements
- For specified tasks, rendered HTML page renders appropriately for intermediate sizes

5.2. Code Quality (50%)

- Your code is compliant with the course style guide, which includes but is not limited to:
  - HTML is appropriately formatted such that each inner HTML is indented with respect to the outer
  - HTML follows the correct structure and usage of head, title, meta, body
  - CSS is appropriate structured to be placed in external stylesheets rather than inline styles
  - CSS ID and class selectors are clearly and meaningfully named
  - CSS has limited repetition where multiple similar components use the same underlying styles
  - Ensure that source code (HTML, CSS) is no more complicated or verbose than necessary to solve
  - Maintaining separation between HTML and CSS for structural and stylistic aspects, respectively
  - Avoiding usage of more obselete methods of page styling that have been discussed in lectures (e.

6. Git Commit Requirements

It's imperative that we are able to track your progress when marking.

There are some requirements for us to track your ongoing progress:

1. You must make commits on at least 4 unique days prior to due date.
2. You must make at least 20 commits across the course of your assignment.

3. Your commits must be meaningful in description (e.g. "Continued work on loop speed")
4. Each commit include no more than 100 lines additions of code (this may differ in future assignments).

must not include any other changes.

You will receive a git score out of 4 marks for your compliance. Anything lower than 3.5/4 will start resultin your gross mark.

7. Originality of Work

The work you submit must be your own work. Submission of work partially or completely derived from any not permitted.

The penalties for such an offence may include negative marks, automatic failure of the course and possibl will be examined both automatically and manually for such submissions.

Relevant scholarship authorities will be informed if students holding scholarships are involved in an incider

Assignments

Do not provide or show your assignment work to any other person — apart from the teaching staff of COM

If you knowingly provide or show your assignment work to another person for any reason, and work derive work was submitted without your knowledge or consent. This may apply even if your work is submitted by

Every time you make commits or pushes on this repository, you are acknowledging that the work you subm

Note you will not be penalized if your work has the potential to be taken without your consent or knowledg

8. Submission

To submit your assignment, you must have pushed all of your code to your gitlab master branch. You can c is on the gitlab site on your master branch.

We will collect the latest work on your master branch of gitlab at the time of submission.

It is your responsibility to ensure that your code can run successfully when cloned fresh from Gitlab.

9. Late Submission Policy

Late submissions are accepted up to 4 days (96 hours) after the due date. The late penalty is 5% per day. the initial deadline.

Another surprise <marquee> just to remind you that you're a cool cu
